C:\Users\briji\AppData\Local\Temp\ipykernel_9712\2080958306.py:1: FutureWarning: Cha
inedAssignmentError: behaviour will change in pandas 3.0!
You are setting values through chained assignment. Currently this works in certain c
ases, but when using Copy-on-Write (which will become the default behaviour in panda
s 3.0) this will never work to update the original DataFrame or Series, because the
intermediate object on which we are setting values will behave as a copy.
A typical example is when you are setting values in a column of a DataFrame, like:

df["col"][row_indexer] = value

Use `df.loc[row_indexer, "col"] = values` instead, to perform the assignment in a si
ngle step and ensure this keeps updating the original `df`.

See the caveats in the documentation: https://pandas.pydata.org/pandas-docs/stable/u
ser_guide/indexing.html#returning-a-view-versus-a-copy

C:\Users\briji\AppData\Local\Temp\ipykernel_9712\2129877948.py:1: FutureWarning: Cha
inedAssignmentError: behaviour will change in pandas 3.0!
You are setting values through chained assignment. Currently this works in certain c
ases, but when using Copy-on-Write (which will become the default behaviour in panda
s 3.0) this will never work to update the original DataFrame or Series, because the
intermediate object on which we are setting values will behave as a copy.
A typical example is when you are setting values in a column of a DataFrame, like:

df["col"][row_indexer] = value

Use `df.loc[row_indexer, "col"] = values` instead, to perform the assignment in a si
ngle step and ensure this keeps updating the original `df`.

See the caveats in the documentation: https://pandas.pydata.org/pandas-docs/stable/u
ser_guide/indexing.html#returning-a-view-versus-a-copy

  df['NoOfPax'].loc[(df['NoOfPax']<1) | (df['NoOfPax']>20)]=np.nan
C:\Users\briji\AppData\Local\Temp\ipykernel_9712\2129877948.py:1: SettingWithCopyWar
